

Austrian Software changes the worldwide conference scene

LINEAPP CAST is the must-have tool for venues and conferences. For the first time ever, audio can be streamed directly from the pocket into the ear.

What is it?

LINEAPP CAST – worldwide first live audio streaming in realtime directly onto mobile devices by using just existing WiFi structures and a desktop computer.

The software is the cost-effective solution for audio streaming and live translations and gives perfect support for hearing-impaired people. The best thing about it? CAST can be used completely offline – multiple streams are possible within the same network, even in different languages, as far as WiFi signal can be reached.

How does it work?

LINEAPP CAST receiver application is free of charge and can be downloaded on the iOS and Android App Stores. The desktop computer (transmitter) needs to install LINEAPP CAST software, which works on MacOS and Windows PCs, and will directly be linked to the audio system of the venue. After the listener's device gets connected with the WIFI, all available streams will pop-up and can be selected by just one click.

Why do I need that?

What could be more pleasant than being able to walk around at the venue, having a cup of tea or coffee, while listening to the keynote in any language, I want? CAST is the answer of these questions, raised by many venues and organizers in the past. Don't let visitors miss a thing at your event. No more renting of expensive hearing induction loops, audio streaming systems or infrared translation tools – CAST is the most innovative conference gadget of tomorrow – by bringing your own device!
